THE ITIL INTERMEDIATE SERVICE LIFECYCLE: CONTINUAL SERVICE IMPROVEMENT CERTIFICATE

The ITIL Intermediate Qualification: Continual Service Improvement (CSI) Certificate is a free-standing qualification, but is also part of the ITIL Intermediate Lifecycle stream, and one of the modules that leads to the ITIL Expert Certificate in IT Service Management. The purpose of this training module and the associated exam and certificate is, respectively, to impart, test, and validate the knowledge on industry practices in service management as documented in the *ITIL Continual Service Improvement* publication.

Target Candidate

The course covers the management-level concepts and core information about the supporting activities within continual service improvement (CSI), but not specific details about each of the supporting processes.

The main target candidate for the ITIL Intermediate Qualification: Continual Service Improvement Certificate includes, but is not restricted to:

- Chief information officers (CIOs)
- Chief technology officers (CTOs)
- Managers
- Supervisory staff
- Team leaders
- Service designers
- IT architects
- IT planners
- IT consultants
- IT audit managers
- IT security managers
- Service test managers and ITSM trainers.
- Individuals who require a detailed understanding of the ITIL CSI phase of the ITIL service lifecycle and how it may be implemented to enhance the quality of IT service provision within an organization
- IT professionals working within, or about to enter, a CSI environment and requiring a detailed understanding of the processes, functions and activities involved
- Individuals who have attained the ITIL Foundation Certificate in IT Service Management and wish to advance to higher level ITIL certifications
- Individuals seeking the ITIL Expert Certificate in IT Service Management for which this qualification can be one of the prerequisite modules
- Individuals seeking progress toward the ITIL Master Certificate in IT Service Management for which the ITIL Expert is a prerequisite.

Prerequisite Entry Criteria

Candidates wishing to be trained and examined for this qualification must already hold the ITIL Foundation Certificate in IT Service Management which must be presented as documentary evidence to gain admission

Candidates who hold the following ITIL qualifications are also eligible, and similar evidence will be required:

- Earlier ITIL (V2) Foundation plus Foundation Bridge
- ITIL Expert in IT Service Management (achieved via Service Manager or Practitioner bridging routes).

Eligibility for Examination

To be eligible for the ITIL Intermediate Qualification: Continual Service Improvement examination, candidates shall fulfil the following requirements:

- At least 21 contact hours (hours of instruction, excluding breaks, with an Accredited Training Organization (ATO) or an accredited e-learning solution) for this syllabus, as part of a formal, approved training course and scheme
- A basic IT literacy and around 2 years IT experience are highly desirable
- Hold the ITIL Foundation Certificate in IT Service Management (or other appropriate earlier ITIL and bridge qualifications– see *Prerequisite Entry Criteria* on p5)
- It is recommended that candidates should complete at least 21 hours of personal study by reviewing the syllabus and the *ITIL Continual Service Improvement* publication in preparation for the examination, specifically *Chapter 2: Service management as a practice*.

Syllabus at a Glance

Learning Unit CSI01: Introduction to continual service improvement

Bloom's Level 2 Objectives – Full understanding of CSI terms and core concepts.

- The purpose, objectives and scope of CSI
- The value to the business of adopting and implementing CSI
- The context of CSI in the ITIL service lifecycle
- The approach to CSI, including key interfaces and inputs and outputs

Learning Unit CSI02: Continual service improvement principles

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- How the success of CSI depends on understanding change in the organization and having clear accountability
- How service level management and knowledge management influence and support CSI
- How the complete Deming Cycle works, and how it can be applied to a real world example
- How CSI can make effective use of the various aspects of service measurement
- What situations require the use of frameworks and models, and examples of how each type can be used to achieve improvement

Learning Unit CSI03: Continual service improvement process

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- What the seven-step improvement process is, how each step can be applied and the benefits produced
- How CSI integrates with the other stages in the ITIL service lifecycle
- How other processes play key roles in the seven-step improvement process

Learning Unit CSI04: Continual service improvement methods and techniques

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- When to use assessments, what to assess and how a gap analysis can provide insight into the areas that have room for improvement
- How to use benchmarking, service measurement, metrics, service reporting, including balanced scorecard and SWOT, to support CSI
- How to create a return on investment, establish a business case and measure the benefits achieved
- How techniques within availability management, capacity management, IT service continuity management and problem management can be used by CSI

Learning Unit CSI05: Organizing for continual service improvement

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- The role of the CSI manager, and the roles of service owner, process owner, process manager and process practitioner in the context of CSI and how they can be positioned within an organization
- How to design, implement and populate a RACI (responsible, accountable, consulted, informed) diagram as well as how to use it to support CSI

Learning Unit CSI06: Technology considerations

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- The technology and tools required and how these would be implemented and managed to support CSI activities such as performance, project and portfolio management, as well as service measurement and business intelligence reporting

Learning Unit CSI07: Implementing continual service improvement

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- CSI implementation: strategy, planning, governance, communication, project management, operation, as well as how to deal with cultural and organizational change

Learning Unit CSI08: Challenges, critical success factors and risks

Bloom's Level 4 Objectives – The knowledge, interpretation and analysis of improvement principles, techniques and relationships, and their application to ensure continual service improvement.

- The challenges and risks such as staffing, funding, management, etc., which can be related to CSI and the details behind how each challenge can be addressed
- The critical success factors related to CSI as well as how to measure and monitor them

Qualification Learning Objectives

This qualification presents a complete overview of CSI including all its related activities: to continually align and realign IT services to changing business needs by identifying and implementing improvements to IT services that support business processes. This qualification reviews improvement activities as they support the lifecycle approach through service strategy, service design, service transition and service operation.

Candidates can expect to gain competencies in the following upon successful completion of the education and examination components related to this certification:

- Introduction to CSI
- CSI principles
- CSI process
- CSI methods and techniques
- Organizing for CSI
- Technology considerations
- Implementing CSI
- Challenges, critical success factors and risks

In addition, the training for this certification should include examination preparation, including a mock examination opportunity.

Level of Difficulty

All ITIL service management qualifications use the Bloom's taxonomy in both the construction of the learning units and in the examination which is based on this syllabus.

A learning taxonomy is a scale of the degree of difficulty in the learning process. These levels apply to the cognitive, affective and psychomotor domains of learning but, in the ITIL Qualification Scheme, we deal only with the cognitive sphere.

Bloom defines six levels of learning in the COGNITIVE domain which are both sequential and cumulative. They move from the simple to the complex. This implies that in order to achieve the sixth level of learning, for example, the instructor must ensure that the previous five levels have been mastered.

Level 1 - The KNOWING level: The candidate is able to bring to mind or remember the appropriate material. The examination questions associated with this level tax the candidate's memory and include such tasks as defining, recalling, listing, recognizing, describing and naming.

Level 2 - The COMPREHENDING stage: The candidate is able to understand or grasp the meaning of what is being communicated and make use of the idea without relating it to other ideas or materials and without seeing the fullest possible meaning or translation of the idea. Examination questions at this level would include scenarios giving examples of, illustrating, inferring, summarizing and interpreting. These actions involve the knowing which has taken place at the first level.

Level 3 - The APPLYING level: The candidate should be able to use ideas, principles and theories in new, particular and concrete situations. Examination questions at this level involve both knowing and comprehension, and might include choosing appropriate procedures, applying principles, using an approach or identifying the selection of options.

Level 4 - The ANALYSING level: The candidate is able to break down a communication (rendered in any form) into constituent parts in order to make the organization and significance of the whole clear. Breaking down, discriminating, diagramming, detecting, differentiating and illustrating are important tasks at this level and can be seen to include the previous levels of knowing, comprehending and applying. Here the significance of the constituent parts of an entity are examined in order to understand the whole more fully.

Level 5 - The SYNTHESIS level: At this level the candidate is able to put back together again the various parts or elements of a concept into a unified organization or whole. This putting together again and making sense of small parts is a crucial factor in intelligence and learning. Examination questions at this level would include scenarios involving creating, writing, designing, combining, composing, organizing, revising and planning. In order for this level of learning to occur, it must include the first four levels – knowing, comprehending, analysing and applying. This level of learning is probably the most intense and exciting for the candidate.

Level 6 - The EVALUATING phase: In this phase the candidate is able to arrive at an overview and to judge the value and relative merit of ideas or procedures by using appropriate criteria. At this level of learning the candidate will be able to compare, judge, appraise, justify, criticize and contrast theories, procedures, methods and concepts. This level involves mastery of the five previous levels of knowing, comprehending, applying, analysing and synthesizing.

For the purposes of the ITIL Qualifications Scheme, the Bloom's level will appear in each syllabus module to identify the highest level of cognitive difficulty that the course content should deliver in order to meet the learning outcome and ensure the competence required to meet the examination level of difficulty.

The following table illustrates the use of the taxonomy in ITIL professional qualifications.

Bloom's Levels and taxonomy	Used by ITIL certification	Intellectual activity in learning outcome and exam proficiency
1. Knowing 2. Comprehending	ITIL service management Foundation Level	The ability to recall, recite, name, and understand the meaning of ITIL terminology and basic practice fundamentals. <i>Vernacular examples used in Syllabus:</i> Understand; describe; identify
3. Applying 4. Analysing	ITIL service management Lifecycle Stream Capability Stream Managing Across the Lifecycle	The ability to use the practices and concepts in a situation or unprompted use of an abstraction. Can apply what is learned in the classroom in workplace situations. Can separate concepts into component parts to understand structure and can distinguish between facts and inferences. <i>Vernacular examples used in Syllabus:</i> Analyse; demonstrate; apply; distinguish; justify; produce; decide
5. Synthesis 6. Evaluating	ITIL service management Managing Across the Lifecycle – level 5 only ITIL Master	The ability to create patterns or structure from composite elements to achieve a new meaning or outcome. Can make judgements, weigh options of ideas and elements to justify and support an argument or case. <i>Vernacular examples used in Syllabus:</i> Evaluate; justify; summarize; plan; modify; manage; control

Intermediate stream qualifications will examine according to the Bloom's level assigned to each syllabus learning unit within each of the service lifecycle and service capability streams. This means that a candidate must be prepared to be tested up to and including that level for any question related to that learning unit or units.

The examination format of complex multiple choice will offer a scenario and questions with a corresponding series of possible answers. Each is constructed to test a candidate's competency up to and including the Bloom's level associated with the syllabus learning unit that the question is mapped to. Instructors should ensure that the module curriculum offers discussion, practical exercises and instruction that will ensure the candidate has the competence required to meet the exam level of difficulty.

The intermediate modules are expected to provide a practical level of proficiency to enable a candidate to utilize the knowledge learned in their work environment. The examinations test a level of proficiency that allows candidates to apply the knowledge learned in the course to correctly select the correct sequence of possible answers.

Continual Service Improvement Syllabus

The ITIL Intermediate Qualification: Continual Service Improvement (CSI) Certificate is awarded to those who complete the eight units of study described below and successfully pass the relevant multiple choice examination.

Core guidance references with publication reference (SS - *ITIL Service Strategy*, SD – *ITIL Service Design*, ST – *ITIL Service Transition*, SO – *ITIL Service Operation*, CSI – *ITIL Continual Service Improvement*) and section numbers are included along with indicative contact study hours.

The contact hours are shown in each learning unit and are suggested to provide adequate time to cover the core guidance content. However, Accredited Training Organizations (ATOs) are encouraged to combine or re-order the learning units in any way that suits the flow of their courseware content delivery. All ATOs must ensure, however, that the minimum contact hours for eligibility for examination are met.

Section numbers are indicated as “chapter . section . subsection” (X.X.X). Unless otherwise indicated, instructional coverage of the content of the entire section referenced is assumed.

Learning Unit	Curriculum subjects covered	Level of Difficulty
ITIL SL: CSI01 Introduction to continual service improvement	<p>The initial learning unit of this course introduces the core concepts and terminology of continual service improvement (CSI). It explains that CSI is about looking for ways to improve process effectiveness and efficiency as well as cost effectiveness in all stages of the ITIL service lifecycle.</p> <p>To meet the learning outcomes and examination level of difficulty, the candidate must be able to understand and describe:</p> <ul style="list-style-type: none"> • The purpose and objectives of CSI Core Guidance References – CSI 1.1.1 • The scope of CSI Core Guidance References – CSI 1.1.2 • The value to business of adopting and implementing CSI Core Guidance References – CSI 1.1.4 • The approach to CSI Core Guidance References – CSI 3.1 • The business questions to be asked to ensure that a CSI initiative is warranted Core Guidance References – CSI 3.1.1 • The context of CSI in the ITIL service lifecycle Core Guidance References – CSI 1.2 • The inputs and outputs to CSI Core Guidance References – CSI 3.12 	<p>Up to Bloom’s level 2</p> <p>Knowing Comprehending</p> <p>A full understanding of continual service improvement core terms and concepts.</p> <p>The ability to recall, recite, name, and understand the meaning of ITIL terminology and basic practice fundamentals.</p>
	Contact hours recommended – 2.0	
ITIL SL: CSI02 Continual service	<p>This learning unit addresses CSI principles and how the success of CSI depends upon an understanding of organizational changes and establishing clear accountability, and the influence of service level management.</p>	<p>Up to Bloom’s level 4</p> <p>Applying Analyzing</p>

<p>ITIL SL: CSI09 Summary, exam preparation and directed</p>	<p>This unit summarizes the material covered in the previous units and prepares candidates for the examination. It is likely that most course providers will wish to offer and review at least one opportunity for a mock examination.</p>	

Learning Unit	Curriculum subjects covered	Level of Difficulty
studies		
	Contact hours recommended – 1.5	

Lecture and Exercises

Meeting the learning objectives of this syllabus can be aided by the use of practical exercises during the delivery of an accredited course. It is recommended that course providers make use of exercises to enhance the reinforcement of the learning objectives in this syllabus. To aid course providers, there are areas within each learning unit whose learning objective includes such phrases as “identify, describe, analyse”, etc, which may be considered as opportunities to introduce practical course exercises. These are not mandated areas for practical exercises, but provided as suggestions for use by course providers.

Format of the Examination

Type	Eight (8) multiple choice, scenario-based, gradient-scored questions. Each question will have 4 possible answer options, one which is worth 5 marks, one which is worth 3 marks, one which is worth 1 mark, and one which is a distracter and achieves no marks.
Duration	Maximum 90 minutes for all candidates in their respective language
Provisions for additional time relating to language	Candidates completing an exam in a language that is not their mother tongue have a maximum of 120 minutes to complete the exam and are allowed the use of a dictionary.
Prerequisite	<ul style="list-style-type: none"> ITIL Foundation Certificate in IT Service Management (or other appropriate earlier ITIL and bridge qualifications– see <i>Prerequisite Entry Criteria</i> on p5) Completion of an Accredited course from an ITIL Accredited Training Provider
Supervised	Yes
Open Book	No
Pass Score	28/40 or 70%

Trainer Qualification Criteria

This syllabus can only be delivered to target groups by an accredited provider/ trainer. Any provider/ trainer must meet the following criteria to be eligible to provide this syllabus:

Criteria	Eligibility	Degree of proficiency validation
Accredited Training Organization	Required	The company shall be registered and in good standing with the Official Accreditor
ITIL Continual Service Improvement Certification	Required	Instructor must present a valid certificate issued by an accredited Examination Institute
ITIL Expert Certification	Required	Instructor must present a valid certificate issued by an accredited Examination Institute

Approved Delivery Structure

Structure	Operational Standard Requirements
Training Delivery	<ul style="list-style-type: none"> Training providers are free to structure and organize their training in the way they find most appropriate, provided the units of the syllabus are sufficiently covered. Training must be delivered via an ATO based on this syllabus. Training can be delivered virtually, via an e-learning / learning technology solution.

Terminology List

After studying this course, the candidate is expected to understand the meanings of the following terms in the context of continual service improvement. This list does not include terms that are explicitly mentioned within the learning units of this syllabus – for example, "critical success factor".

alert	Data-to-Information-to-Knowledge-to-Wisdom driver	problem
audit	early life support	process
authority matrix	effectiveness	programme
availability	efficiency	project
availability plan	ISO 9000	quality
balanced scorecard	ISO 9001	quality management system
baseline	ISO/IEC 20000	quick win
benchmark	IT service continuity plan	review
budgeting	IT service management	service catalogue
business case	key performance indicator	service improvement plan
business objective		service knowledge management system
business relationship management	management information system	service level
business unit	Management of Risk (M_o_R) management system	service level agreement
Capability Maturity Model Integration (CMMI)		service level target
capacity plan	maturity	service portfolio
change proposal	mission	SMART
compliance	monitoring	stakeholder
configuration item	objective	standard
configuration management system	operational level agreement	supplier
continual service improvement	outcome	SWOT analysis
contract	plan	tension metrics
cost-effectiveness	Plan-Do-Check-Act	total cost of ownership
culture	policy	trend analysis
customer-facing service	post-implementation review	value on investment
dashboard	proactive problem management	

----- END OF DOCUMENT -----
